

# Industrial-Scale Food Freezing— Simulation and Process

## New Version 3.0

Freezing and thawing involve transfer of heat inside the product and between the product and the ambient environment and are governed by the nature and properties of the food and the conditions at the interface between it and the environment. Calculating the correct times using all the required parameters can be very laborious and time consuming—and prone to error. In response to the widespread need for a straightforward and dependable method of calculating freezing times, researchers at the University of California developed a software program with funding from WFLO. The software has property information built in for over 90 specific commodities and can be modified to fit other products as well. The results of the calculations can be viewed as a table or graph, saved to disk, or printed.

Now, WFLO is offering an upgraded version of the software that is even more user friendly and flexible than previous releases. Version 3.0 is available at US\$295 (\$195 for IARW-WFLO members, students, and non-profit organizations), with a 25% discount for two or more CDs ordered at the same time and sent to the same address. Those who purchased previous versions can order an upgrade for only \$75.

To order by credit card, fax this form to Sara L. Martin at WFLO: 703-373-4301.

To pay by check, send this form along with your payment to: World Food Logistics Organization, 1500 King St., Suite 201, Alexandria, VA 22314

- Price:**
- US\$295, Non-member
  - US\$195, IARW-WFLO member company
  - US\$195, Student
  - US\$195, Non-profit organization
  - US\$75, Upgrade copy
